1. Scope

The STP (System Test Plan) specifies the test strategy and test planning. It references tests to be performed to verify the accordance of the demanded features given by the SRS (System Requirements Specification) to the implemented features. The document derived from the STP is the STR (System Test Report) where additionally the results are given.

3. Product Names and Attributes

The following test objects must be verified:

RefId.	Product Number	Product Name	Product Description
1	Build v1.0	DD2AML Conversion	Library which is responsible for the conversion
		Library	to AML
2	Build v1.0	DD2AML CLI and GUI	Command Line Interface and Graphical User In-
			terface for conversion

4. Features

The following requirements must be verified, as long as they are not classified as "not to be tested". This table shows the test coverage between functionality and test suites or test cases.

Req ID	Functionality	Priority	Testsuite ID
LF10: Format analy-	Checks which file format was se-	Α	TS-001: Conversion Library
sis	lected

	messages to the user		
LF100: CAEX Version	Verifies the CAEX version to be	Α	TS-001: Conversion Library
	used for the conversion		

5. Test Preparation Strategy

The creation of tests will be application case-based. Three main application cases can be identified, the conversion library, the CLI, and the GUI.

The Conversion Library contains the main functions of the converter. The correct conversion of an IODD file and a CSP+ file must be tested. The conversion can only be triggered by using the provided interfaces. The functionality of the library is therefore tested particularly using the CLI, which the library uses for the conversion.

The CLI is another main application case. It is used to pass arguments like the file path of the input file and optionally the output path to the application to start the conversion. As there are several flags that can be passed to the command line tool, the equivalence class method will be used to reduce the number of tests.

The GUI is the last main application case. Unlike the CLI, the Gui provides input fields in which the respective file path is inserted. These fields must be checked.

6. Test Execution Strategy

Since it is a further development of an already existing software, a complete test is not necessary, but it is still useful. The test should be divided into the following phases:

- 1) Command Line Interface
- 2) Conversion Library
- 3) Graphical User Interface

Since the CLI is needed for the conversion so that the conversion library can be tested and used, the CLI is tested first.

To verify that the conversion of an IODD or CSP+ file to an AML file works correctly, which is the main function of the program, it is tested next.

In the end, the GUI is tested.

7. Test Equipment

The following equipment must be available for testing:

- A computer with Windows 7 or higher
- Installed AutomationML Editor (<u>Download here</u>)
- The DD2AML software

8. Test Schedule and Budget

8 d	Fre 24.04.20	Die 05.05.20	
3 d	Fre 24.04.20	Die 28.04.20	Antonia Wermerskirch

2 d	Fre 01.05.20	Mon 04.05.20	Lara Mack
1 d	Mon 04.05.20	Mon 04.05.20	Bastiane Storz
1 d	Die 05.05.20	Die 05.05.20	Antonia Wermerskirch
	3 d 5 d 4 d 2 d 1 d	3 d Fre 24.04.20 5 d Die 28.04.20 4 d Die 28.04.20 2 d Fre 01.05.20 1 d Mon 04.05.20	3 d Fre 24.04.20 Die 28.04.20 5 d Die 28.04.20 Mon 04.05.20 4 d Die 28.04.20 Fre 01.05.20 2 d Fre 01.05.20 Mon 04.05.20 1 d Mon 04.05.20 Mon 04.05.20

The testing of the CLI begins as soon as the CLI is completed. This makes it possible to make the necessary corrections quickly. The conversion library can only be tested once the rules for one input format, but preferably both input formats, have been established. Since only minimal changes are made in the installer of the GUI, the GUI can be tested as soon as all adjustments intended for the GUI have been made.

No budget is needed for the tests, as they are all performed by hand.
